

SyloPay Frontend UI Documentation

React Single Page Application Components & Docusaurus Guide

1. Architecture & Core Pages

The SyloPay frontend is built as a Single Page Application (SPA) using React, Vite, TypeScript, and TailwindCSS. It implements a smooth, multi-step Buy Now, Pay Later checkout pipeline:

Route	Page Name	Operational Purpose
/	CheckoutPage	Product catalogs displaying premium items (e.g., Samsung Galaxy S25 Ultra) and checkout initiation.
/quotation	QuotationPage	Visual selection of credit terms, number of installments (1-12), and DeFi APR comparison.
/contract	ContractPage	Personal customer information capture (Pix/PIX rampa) and Freighter Wallet signature.
/processing	ProcessingPage	On-chain registration feedback loop, Pix sandboxed QR Code generation, and webhook listening.
/dashboard	DashboardPage	Customer's portal to track and settle upcoming installments directly using USDC on-chain.

2. Global State Management (useBNPL)

A robust React Context hook (useBNPL) serves as the single source of truth, synchronizing checkout steps, product selections, user details, quote calculations, and Soroban contract states:

```
interface BNPLContextType {
  currentStep: 'checkout' | 'quotation' | 'contract' | 'processing' | 'dashboard';
  product: Product | null;
  selectedPlan: InstallmentPlan | null;
  personalInfo: PersonalInfo | null;
  contractId: string | null;
  walletAddress: string | null;
  setProduct: (p: Product) => void;
  selectPlan: (plan: InstallmentPlan) => void;
  savePersonalInfo: (info: PersonalInfo) => void;
  setContractId: (id: string) => void;
  setWalletAddress: (address: string) => void;
  resetCheckout: () => void;
}
```

3. Core Component Library

- **Button** — Robust button wrapping custom variations (primary, secondary, outline, ghost) and loading loaders.
- **ProgressBar** — Glowing orange checkout indicator tracking step checkout -> quotation -> contract -> processing -> dashboard.
- **Logo** — Displays official SyloPay typography and branding image.
- **WalletConnector** — Freightier wallet connector and details display.
- **PricingCalculator** — Compares BNPL checkout APR with credit card fees.
- **PixPayment** — Generates sandbox Pix copy-paste key and payment verification hooks.

4. UI Design System & Brand Aesthetics

SyloPay enforces a premium, dark-mode visual theme characterized by high-end typography and sleek shadows:

- **Primary Accent:** Glowing Amber Orange (#D97706) representing blockchain energy.
- **Dark Slate:** Off-black gradients (#0A0A0A, #121212) to create glassmorphism panels.
- **Text Hierarchy:** Off-white high contrast (#F4F4F5) and low contrast muted elements (#71717A).

5. Docusaurus Documentation Portal

We have successfully integrated Docusaurus as our core developer specification documentation portal! Docusaurus provides a searchable, fast, and modern documentation website complete with interactive diagrams and clean UI.

To run the searchable Docusaurus documentation website locally:

```
cd docs
npm start
```
